

# The Superior Source of Humic Inputs

Certain levels of microbial activity in the soil are critical to efficient plant uptake of nutrients and ultimately, optimum growth and yields.

The basic building blocks of all life forms is Carbon, and with the proper mix of both Carbon chains, all crops — in any region — can benefit from an effective application that provides plant-available nutrients. Additionally, Humic and Fulvic acids act as natural complexing agents for greater Nitrogen efficiency, allowing for lower inputs.

*IQ Carbon* will help you grow more robust crops, while lowering overall nutrient inputs.

## *IQ Carbon* Is The Most Efficient Source Available!

### **Enhances Beneficial Soil Microbial Activity**

The carbons within *IQ Carbon* provide the “food” that microbes seek out within the root zone. The dramatically short life cycle of microbes dictates that a reliable blend of available carbon is necessary within the growing environment.

### **Allows For Greater Nitrogen Efficiency**

*IQ Carbon* allows for as much as 20-50 percent lower overall Nitrogen inputs, which is not only more cost-efficient, but also reduces the risk of nutrient run-off into ground and surface water.

### **Provides Plant-Available Nutrition**

The unique formulation of *IQ Carbon* provides the perfect balance of Humic and Fulvic acids. The plant-available carbon nutrients in *IQ Carbon* are vital for maximizing plant growth potential.

# Simply Intelligent Growth

David Zuberer, Professor Emeritus, Texas A&M University said, "Without a doubt, the most important limiting factor for microbial growth in soil (assuming moisture is adequate) is the abundance of available organic carbon sources."

*IQ Carbon* is composed of Humic and Fulvic acids which has shown to be a highly effective and efficient formulation for enhanced soil balance and plant nutrient availability.

While there are many Humic sources on the market, *IQ Carbon* is unique, with a carefully balanced blend of carbon chains that are readily taken in by the plant for growth and enhance the growing environment for strong plant growth.

For greater soil structure, enhanced microbial activity and increased Nitrogen efficiency, *IQ Carbon* is your best choice.

## IQ Carbon - Benefits

- ✓ The most efficient source of Humic and Fulvic acids available
- ✓ Ultra-Low application rates  
Only 1-3 lbs per acre!
- ✓ Increases Nitrogen efficiency, allowing for lower overall N inputs
- ✓ No additional baggage of long carbon chains
- ✓ Clean, easy handling solutions
- ✓ Will not corrode application equipment
- ✓ High soluble
